

The Journal of Experimental Zoology Volume 22

Filesize: 1.39 MB

Reviews

It is really an incredible publication which i actually have possibly read through. It really is written in easy phrases and not confusing. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Jodie Wehner)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 158 pages. Dimensions: 9.7in. x 7.4in. x 0.3in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: . . . absolute germinal resisting power that all or practically all of the offspring are defective in greater or less degree and in reference to some one or more characters. Stockards F₂ and F₃ results indicate that though the untreated F₁ animals from alcoholists may appear normal, they really are somewhat defective. f. If, on the other hand, the dosage, though absolutely the same, be relatively lower in proportion to the mean absolute resisting power of the germ cells it would be expected that all three germ cell classes (a), (6) and (c) would be represented. The zygotes actually formed would be chiefly produced by (c) germ cells, and to a much smaller extent by (6) cells. Under these circumstances it would necessarily follow that a random sample of the zygotes produced after the action of the deleterious agent would, on the average, be superior in respect to such qualities as growth, etc. , which may be supposed to depend in part at least upon germinal vigor, to a random sample of zygotes formed before the action of the agent, because the germ cells of class (c) are a selected superior portion of the total gametic population. g. Essentially that proportionality between effective dosage of the deleterious agent and absolute resisting power of the germ cells outlined in the preceding paragraph (f) is believed to have obtained in the present experiments with fowls, Nices experiments with mice, and natures experiments with the workingmens population studied statistically...
