THE COMPOSITION OF APPLES IN RELATION TO CIDER AND VINEGAR PRODUCTION; II. THE COMPOSITION OF CIDER AS DETERMINED BY, DOMINANT FERMENTATION WITH PURE YEASTS (CLASSIC book)**.

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Chemical Composition of Apples and Cider: I. The Composition of Apples in Relation to Cider and Vinegar Production; II. The Composition of Cider as Determined By, Dominant Fermentation With Pure Yeasts Sir: The manuscript offered for publication herewith contains the results of elaborate studies made on the composition of apples, apple juices, and the fermented products thereof, conducted by this Bureau in collaboration with the agricultural experiment station at Blacksburg, Va., during the past two years. The chemical work was done partly in the Bureau of Chemistry, but chiefly in the laboratories of the Virginia station, while the fermentation experiments were made solely at the experiment station. In regard to the authorship, William B. Alwood is solely responsible for the plan and direction of the work herein presented, and the report has been prepared by him. To R. J. Davidson should be accredited the chemical work done at the Virginia station, while W. A. P. Moncure had charge of the fermentation room and kept the records of that part of the work. The data obtained throw a great deal of light upon the processes of fermentation and the methods which should be used to secure the highest grade of products from the juices of apples and other fruits. The researches reported here form a sequel to Bulletin No. 71 of this Bureau, entitled A Study of Cider Making in France, Germany, and England, and I recommend the publication of this manuscript as Bulletin No. 88 of the Bureau of Chemistry. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important...
